

Calming and
Focus Aid

Paste or Powder

DESCRIPTION

Engage promotes a sense of relaxation, focus, and mental alertness in horses without drowsiness. This proprietary formulation is unique from all other calming supplements on the market because it supports normal function of neurotransmitters in the brain, specifically serotonin and dopamine. Engage provides the following benefits:

1. Calming effect on the nerves.
2. Promotes relaxation.
3. Enhances brain function.
4. Helps horses cope with external stresses.
5. Helps maintain normal emotional balance.
6. Helps horses maintain a normal and relaxed disposition.
7. May help curb destructive behavior (such as during stall rest).
8. Supports behavior modification and training programs.

FEEDING DIRECTIONS

Full Dose = 2 tubes (60cc) of paste OR 2 packets of powder (30g)

For the first use, give 2 tubes the night before competition, and then 2 tubes again 1 to 2 hours prior to competing.

When giving your horse Engage Paste or Powder on an empty stomach, wait 60 – 90 minutes for full effect.

When giving your horse Engage Paste or Powder mixed with feed, wait approximately 120 minutes for full effect.

Once Engage is given and the time period for full effect has been achieved, wait at least 4 hours before giving additional Engage; when giving subsequent doses of Engage the amount given may be reduced in order to maintain desired effect.

Powder: DO NOT EXCEED 8 packets (120 g) per 24 hours.

Paste: DO NOT EXCEED 8 tubes (240 cc) per 24 hours.

INGREDIENTS - PASTE
