

Metabolic pH &
 Electrolyte
 Support for Horses

DESCRIPTION

Turbo Mag BCAA helps maintain hydration and proper metabolic pH to support muscle function, cellular activity, and fluid balance in horses.

1. Helps maintain proper metabolic pH.
2. Helps support hydration levels.
3. Replaces lost electrolytes.
4. Helps maintain normal fluid balance in blood and tissues.
5. Helps maintain normal concentration of minerals.
6. Helps maintain proper body composition.
7. Helps muscle function and fluid balance.
8. Helps replace fluid lost through sweat.
9. Supports healthy cellular activity.

FEEDING DIRECTIONS

TO START: Feed 1/4 scoop per day mixed with normal grain ration for 3-4 days or until horse becomes accustomed to the taste.

DAILY USAGE: Feed 1 scoop per day top dressed over horse's normal grain ration.

PERFORMANCE: Feed 2-4 scoops per day for 2-3 days prior to and on the day of event. Amount can be increased up to 8 scoops per day. For horses working at intense levels in hot or humid conditions, equal parts of plain white salt can be fed in addition to Turbo Mag BCAA™.

TRANSPORT: Feed 2-4 scoops per day for 2-3 days prior to travel, the day(s) of travel and the day after travel, top dressed on horse's normal daily ration.

NOTE: It is best to split the amount fed between two feedings. If horse sorts out Turbo Mag BCAA from grain, add enough water to grain mixture so that Turbo Mag BCAA coats grain. This also improves palatability for most horses.

43cc scoop holds approximately 50 grams.
